

SPICT-4ALL

Dr Lawrence Pike, MB, ChB, Dip Pall Med, FRCGP
Dr Guy Peryer PhD, CPsychol

Aims

- To increase the recognition of people in need of supportive or palliative care
- To discuss the development of SPICT-4ALL as a version in accessible language and its use within care homes to support better generalist palliative care and care planning for a frail, elderly population
- To empower those without a nursing or medical education to contribute their expertise and knowledge.

- Introduction (5 minutes)
- Discuss benefits (10 minutes)
- Discuss barriers and concerns (10 minutes)
- Feedback from groups and discussion (15 minutes)

Patient stories

from a care home

- Recognition is important
- Evidence that it is not done well
- Who could help?
- But they need a tool - SPICT-4ALL
- How do we use this for our own population?

Resources

UK Specialist Palliative Care workforce 5500

UK Generalist workforce 2.5 million

UK Population 65.6 million

Evidence of increased demand

End of life care provision in care homes and the community needs to double by 2040 (Bone et al , 2017)

By 2040 - people requiring palliative care could increase by >40% due to deaths from chronic illness (Etkind et al, 2017)

Projected increases will require a further 71,215 care home places by 2025 and 189,043 by 2035 (Kingston et al, 2017)

High care needs — implications for future provision of community services and the state provision of funding for care. (Kingston et al, 2017)

If there is no expansion in care home and home care services – the decline in hospital deaths will reverse by 2023 (Bone et al, 2017)
